## EXPERIENCE

### SDE-1 Backend

September 2025 – present

*Osfin — fintech reconciliation automation platform*

Bangalore, India

- Designed rollback flows across ingestion and reconciliation stages for datasets of up to 1 crore (10M+) records, replacing manual, query-based rollbacks, with summaries stored for an audit trail.
- Implemented Quartz Scheduler trigger management for 120 reconciliation batch jobs (15-thread pool), replacing a manual query-based process to pause triggers.
- Built a multi-channel (Email/Slack/UI/SMS) notification module using MessageChannel, integrated across alerting, job CRUD, report CRUD, and other core flows, with targeting at user, role, list, or module level.
- Led modularization of the authentication module into a leaf component with no internal dependencies, enabling reuse across services.
- Developed an “Alert Run Now” feature to preview a sample of configured alerts before activation.
- Handled on-call rotations, triaging 50+ production incidents, driving RCAs, and shipping fixes to prevent recurrence.

### SDE

June 2024 – August 2025

*Vegrow — B2B agritech marketplace for fruits*

Bangalore, India

- Developed APIs and views in Ruby on Rails to manage supply chain operations.
- Built a Golang microservice to generate, send, and track OTPs sent through Kaleyra.
- Optimized API performance in Ruby on Rails, reducing response times by 60%.
- Upgraded Ruby on Rails 6.0 → 7.1 and Ruby 2.7 → 3.3.
- Reduced unit test runtime by 50% by implementing parallel execution for unit tests.

### SDE Intern

January 2024 – May 2024

*Vegrow — B2B agritech marketplace for fruits*

Bangalore, India

- Implemented a bastion host to restrict direct server access and route service interactions through a controlled gateway.
- Contributed to increasing unit test coverage for a critical Ruby on Rails application from 8% to 90% using RSpec, as part of a team of 5.
- Established centralized logging for all backend services using New Relic, reducing log retrieval time by 60%.

## EDUCATION

**Velagapudi Ramakrishna Siddhartha Engineering College, Vijayawada**

CGPA - 9.05

*Bachelor of Technology in Computer Science*

January 2021 – April 2024

## TECHNICAL SKILLS

**Languages:** Java, JavaScript, Golang, SQL

**Frameworks and Libraries:** Spring Boot, Spring Batch, Spring Data JPA, Spring Security, Spring Integration, Spring Cloud, Hibernate, Quartz Scheduler, Ruby on Rails

**Developer Tools:** Git, Docker, GitHub Actions, Kubernetes, AWS, Jenkins

## ACHIEVEMENTS

- Earned the Knight badge (max. rating - 1945) on LeetCode, placing in the top 4% of users globally.
- Secured Rank 663 out of 21,511 participants (top 3%) in LeetCode Biweekly Contest 156.

## PROJECTS

**LLD-with-UI | Java 17, Spring Boot, React 19**

[Source Code](#)

- Built a 60-case-study Low-Level Design portfolio (Parking Lot, Uber, Splitwise, Rate Limiter, Payment Gateway) unified in a single backend + frontend codebase, each with a live REST API and an animated simulation of the design.
- Implemented from-scratch concurrency primitives across the portfolio — a custom thread pool, a striped-lock ConcurrentHashMap, and semaphore-coordinated producer/consumer systems — using deadlock-safe multi-resource locking.
